

Planning your Peace River Canoe Trip

The Peace River is a unique place that holds a variety of wilderness experiences for a variety of different groups. No matter what your group's goals and experience levels, we can help you plan the canoe trip that best fits your crew.

POINTS COVERED IN THIS GUIDE:

- 1) WHY GO RIVER TRIPPING?**
- 2) SEASONAL WEATHER, RIVER CONDITIONS**
- 3) BEST TIMES**
- 4) BEST PLACES**
- 5) PADDLING SKILL REQUIREMENTS**
- 6) LOGISTICS AND SAFETY**
- 7) GEAR CHECKLIST**
- 8) MAPS, GUIDES, PUT-IN AND TAKE-OUT LOCATIONS**
- 9) TERESA GRIFFITH DISTANCE GUIDE**

For personal assistance in trip planning call 877-835-1277(USA and Canada) or +1 835-1271 (International) and talk to Anne

1) WHY GO RIVER TRIPPING?

Many people are unable to really express what they get, or hope to get, from wilderness river tripping. Like planning any trip, there are pitfalls, so the payoffs need to be real and possible!

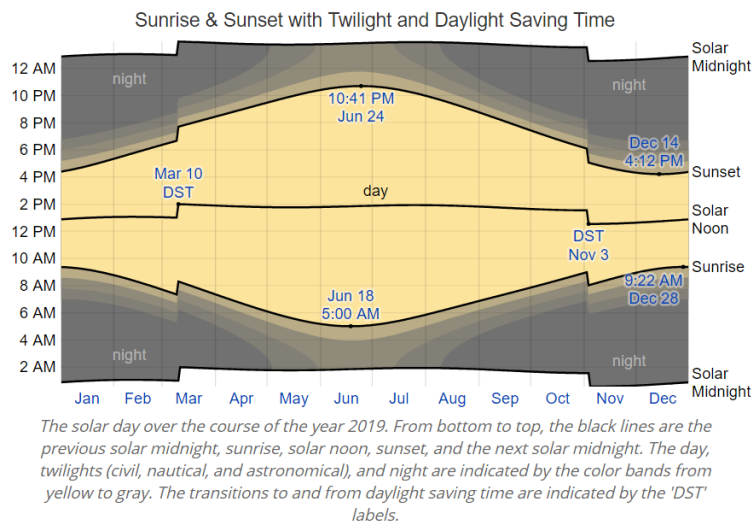

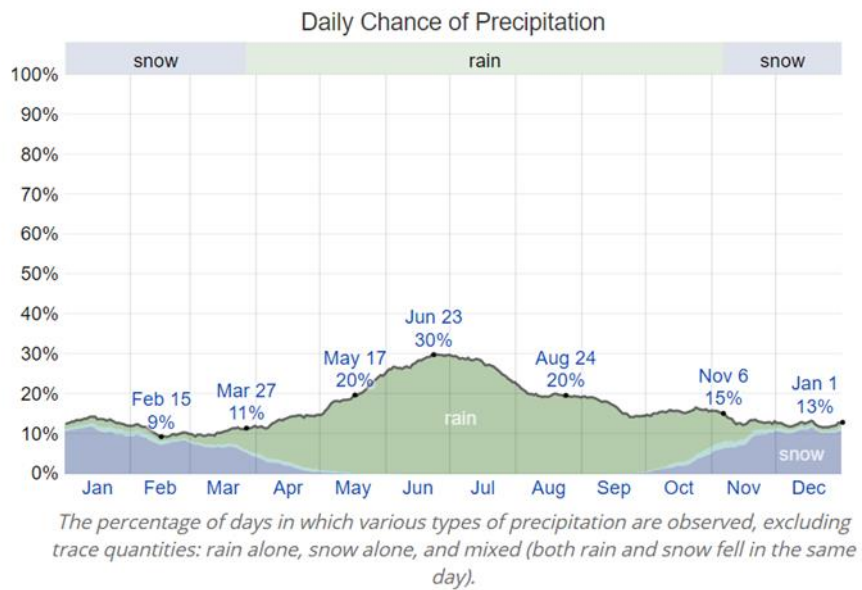

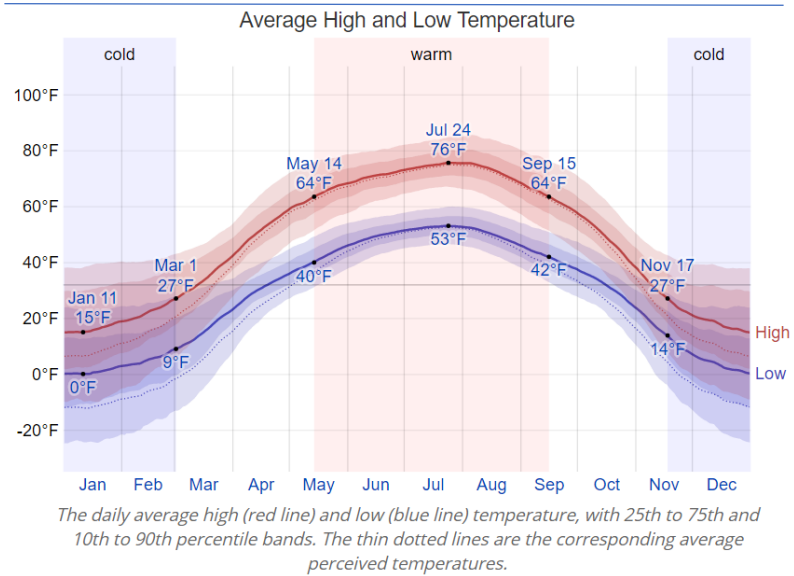

Add this (totally non-exhaustive!) list of benefits to your own:

- Leave stress and worries behind
- Challenge yourself mentally and physically
- Spiritual healing from nature
- Connect on a deeper level with special people
- Learn, practice and improve outdoor and photography skills
- Try out new gear and stretch your skill level
- Play and chill
- Teambuilding

How long should you plan for? 5 days or more is an ideal amount of time to allow time to leave the hustle bustle at home and get into rhythm with the wilderness. That said, you can still have a great time on a shorter trip.

2) SEASONAL WEATHER, RIVER CONDITIONS

- WEATHER

- **WEATHER (cont'd)**

- Shoulder season paddling May to mid-June and mid-September to mid October can have unpredictable conditions, both in weather and river flows. Residual ice on the south banks of the river in early spring can limit access. Later in the fall, frost and snow are not impossible. **For more detailed weather information, go to [this site](#)**

- **RIVER CONDITIONS**

The Peace River flow levels are consistently inconsistent. The combination of precipitation, and the powers that be regulating the Bennett Dam near Hudson's Hope BC, make it basically unpredictable on any given day.

However, in general river flows are likely to be highest in June of any given year. It's always good to check seasonal or current conditions of the river, and campsite access. Find [current river flow conditions here](#).

- At High water levels: Caution is needed in entering and exiting the river. You're going to get where you're going much faster than average. Fishing isn't going to be great. Finding camping spots on islands and riverbanks could be more challenging but not impossible.
- At Low water levels: great for fishing and swimming. You might get stuck occasionally on sand bars. Lots of choices for camping spots. In these conditions the [Backroads map book](#) for Northern Alberta is a great resource as it notes the deepest channels around islands
- Variability can be a lot on a daily basis so never leave a boat untied overnight, or you might be walking or swimming to your destination the next day

The red line shows the 2016 levels, green is the max over last 77 years, and blue is historical minimum.

3) BEST TIMES

- Fishing: any time but amateurs will find it easier in clearer water of Aug-Oct
- Berry picking: mid-June to late July
- Swimming in the river: Late July, August NOTE: ***the Peace has a very strong current and swimming should only be done in side pools and backwaters, A HIGH DEGREE OF CAUTION IS REQUIRED FOR CHILDREN, DOGS, OR POOR SWIMMERS***
- Almost no signs of civilization on the river: spring and fall
- Wild flowers: June
- Spectacular colors and awesome sunsets: September
- Northern Lights: October to May
- Bird migrations: mid Sept. to mid October
- Bugs – if problematic, they will be at their peak in June. However most years bugs are not going to be a significant factor until you get to the more northern reaches, ie north of the Manning area (Guide #19)

4) BEST PLACES

- There are multiple possible entry points along the river. (see Distance Guide below). The upper part of the river is the most scenic, (upstream from our location) since the hills get progressively lower as you finally reach Fort Vermilion.
- Exposure to civilization is least on the upper (above Pratt's Landing) and lower(after Peace Island) parts of the river

5) PADDLING SKILLS AND RIVER TRIPPING EXPERIENCE REQUIREMENTS

- The Peace is a relatively benign river, with no significant rapids from any start point below the Bennet Dam to Fort Vermilion. However, note that the Vermilion Chutes at Fort Vermilion are impassable by canoe and must be bypassed or portaged.
- Nevertheless, the Peace is large and deep, and its strong current and unpredictable back-currents should always be respected
- To avoid potential pitfalls, be sure to acquire basic paddling and outdoor skills, reasonable fitness, and get local current advice and good maps. Good planning is essential for a successful trip.
- With a good leader, the Peace is an excellent venue for families and beginners

6) LOGISTICS AND SAFETY

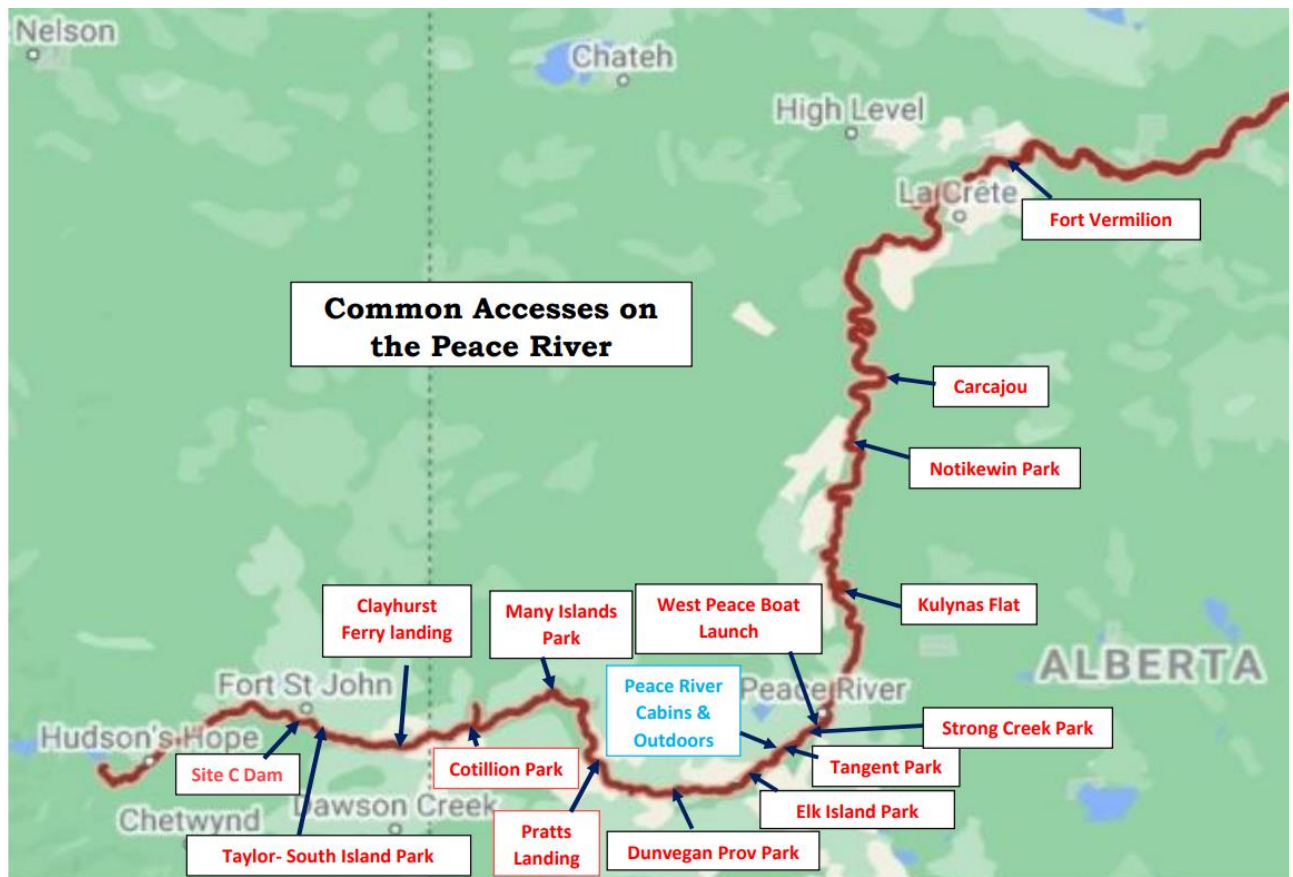

- Planning your put in and take out:
 - The top end of the river is the Bennett Dam, you will have to enter below the dam. The distance from Hudson's Hope to Fort Vermilion is 812 kms, so there are lots of choices for trip duration and locations.
 - Site C dam: water access through the Site C dam site has been stopped as of fall 2020. This means boat access through the dam site is no longer possible.
 - Check the [Site C Project Website](#) for updated information regarding passage around the site. To avoid the area altogether, plan to put in at the Taylor BC landing (Teresa Griffiths Guide 5, see below)
 - There is excellent highway access to some put points along the river but many gravel access roads and landings can be damaged, impassable or even closed. Contact Peace River Cabins and Outdoors current information about the condition of the more remote accesses
 - A nice average paddling day is 40-50 km for medium exertion
 - Consult with Peace River Cabins and Outdoors for pre- and post-trip information, current conditions, and for help with [logistics, rentals and shuttles](#).
 - The hot showers at our facility, or maybe a [wood fired hot tub experience](#), make for a great ending to successful river tripping!
- Safety
 - Communication devices: For some, there is peace of mind to be gained by carrying some kind of communication device on your trip. Cell phone reception is sporadic along the length of the river but possible. Make sure to leave it off when not using to preserve battery power. Or carry a mobile charger.
 - Consider using Peace River Cabins and Outdoors as your emergency rescue contact
 - Wildlife sightings are common. Avoid feeding wildlife and have a plan for food storage

7) GEAR CHECKLIST

- There are numerous checklists out there. Here's one: <http://www.camping-expert.com/canoe-camping-checklist.html>
- We would add: 1) bear spray, make sure you know how to use it properly if need be 2) small axe and saw, 3) bird & plant identification guides, 4) water purification gear

8) MAPS, GUIDES, PUT-IN AND TAKE-OUT LOCATIONS

- The [Backroads Map Book for Northern Alberta](#) is a good basic river guide for short trips, available in many stores including drug stores and on Amazon. Topographical maps are also an option.
- For more detailed information on points of interest, takeout points, GPS coordinates and campsites, we recommend the Teresa Griffith Guides. See links to pdf files at the end of the guide. Or we can forward them on request for no charge by [email](#).
- [Mark's Guide for Alberta Paddlers](#) is another one that is available at multiple sources such as Paddle Alberta and MEC, it has less detail than you might want for maps.

9) TERESA GRIFFITH DISTANCE GUIDE

This chart contains links to the Teresa Griffith guides up to #12. *For guides 13-25 or you are unable to download PDF's please [email Peace River Cabins and Outdoors](#)*
